ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., January, 1942 No. 1

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

January, 1942, was somewhat colder than average, the mean temperature of 38.1° being 3.1° below the 52 year average. The first eleven days of the month were much colder than average with daily temperatures as much as 25° to 30° below normal. During this period daily maximum temperatures were below the freezing point over much of the State. Beginning with January 12th, daily temperatures were almost continuously above normal during the remainder of the month. Considering individual stations, the highest monthly mean temperature was 45.8° at Portland, the lowest was 33.2° at Lead Hill. The highest temperature reported during the month was 83° at Arkadelphia on the 23d and 24th, the lowest was −21° at Corning and Mammoth Spring on the 8th. Practically all of the stations in the State recorded their highest and lowest temperatures on these dates. Nearly half of the stations in Arkansas recorded subzero temperatures on one or more days, some of the stations being located in the southern section of the State. Generally, the northeastern counties experienced the coldest weather.

Precipitation averaged 3.20 inches in January for the State as a whole, which is 1.17 inches below the 52 year average. The heaviest totals occurred in the northeastern section but the precipitation was quite evenly distributed over the State. About one fourth of the stations measured over four inches of precipitation and about one fifth measured less than two inches. The largest monthly amount reported from an individual station was 6.28 inches at St. Francis and the least was 0.90 inch at Warren. The greatest amount reported in 24 hours was 2.06 inches at Hot Springs on the 29th-30th. Snowfall was the heaviest in two years in Arkansas, totals ranging from inconsequential amounts in the extreme southeastern counties, to 11 inches at Subiaco. Practically all of the snow fell on two days, the 3d and 7th. The snow remained on the ground for several days in the northern half of the State, and was beneficial to vegetation, since it occurred just before the severe cold spell. Some sleet was reported during the first decade of the month. There was an average of seven days with a measurable amount of precipitation.

There were 12 clear, 6 partly cloudy and 13 cloudy days. Sunshine averaged 67% which is considerably above normal for January. Moderately strong winds occurred on the 1st, 29th and 30th, but caused no property damage.

The Black River was slightly above flood stage during the first four days of January at Black Rock but was falling the remainder of the month. The lower White was high during the first half of the month, reaching slightly above flood stage at Georgetown, Clarendon and St. Charles. However, there was no flood damage. Other streams in Arkansas were at moderate or low stages throughout January.

Seasonal farm activities were carried on during the month when weather permitted. The first half of the month was too cold for plowing because of frozen soil, but during the latter half, weather conditions were more favorable. It is thou that fruit trees survived the severe cold in good condition. Vetch, wheat, oats and other winter grains came through the month in good condition. Feed was scarce in some localities, but livestock appeared to be in generally good condition at the end of the month.

B.N.W.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters [a], [b], [c], number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Hon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station, NR, No record.

U. S. DEPARTMENT OF COMMERCE, WEATHER BUREAU

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVII LITTLE ROCK, ARK., FEBRUARY, 1942 No. 2

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

February, 1942, was colder than normal and with the exception of the previous February, it was the coldest February since 1914. The mean temperature was 41.2°, for the State, which is 2.3° below the 52 year average. Warmer than average weather occurred in the State from the 3d to the 6th, and 13th to 16th, but on most other days sub-normal temperatures prevailed. Considering individual stations, the highest monthly mean temperature was 47.0° at Magnolia, and the lowest was 36.0° at Devils Knob. The highest daily temperature reported during the month was 81° at Camden on the 6th and the lowest was —2° at Gravette on the 18th and 19th. Practically all the stations in the State reported their highest temperatures on the 5th and their lowest on the 18th or 19th.

Sunshine amounted to 51% of the possible amount and was slightly above normal in the western and below normal in the eastern districts.

The month was slightly drier than the average of previous Februarys. The monthly precipitation, based on the records of 112 stations, was 2.97 inches, which is 0.44 inch less than the average of the past 52 years. The greatest monthly amount reported from an individual stations was 5.63 inches at Clarendon and the least was 1.16 inches at Waldron. Only a few stations recorded less than two inches of precipitation and about one fifth measured over four inches. The greatest amount reported in any 24 hours was 2.16 inches at Wabash on the 23d. Precipitation was quite general over the State from the 4th to 6th, 9th, 10th, 15th to 18th, and 23d to 26th. Most stations measured their heaviest rains on the 16th or 23d. There was an average of eight days in the month with a measurable amount of rain. There were nine clear, seven partly cloudy and twelve cloudy days.

Snowfall averaged 1.4 inches in the State during February. This is slightly below the 52 year average of 1.8 inches. Amounts ranged from none in the extreme southern districts to 7.5 inches at Fayetteville Experiment Station. Snowfalls were general on the 18th, 23d and 26th. The heaviest snowfall occurred on the 26th, but melted almost as fast as it fell.

February weather was generally too cold, particularly during the latter part of the month and farming activities became considerably delayed. Some plowing was accomplished when weather conditions permitted and gardens were being put in during the latter part or the month in the southern counties. Fruits remained dormant all month. As the month ended, winter grains and cover crops looked good and pastures were turning green.

On February 5th, a series of tornadoes occurred over the State, tornadic winds being reported in Pike, Clark, Garland, Hot Spring, Sheridan, Saline, Arkansas and Pulaski counties in the central section, and in Carroll and Randolph counties in the northern part of the State. Buildings, electric wires and trees were blown down in each of these counties. However, the greatest damage occurred in Pulaski County, particularly in the City of Little Rock. In Little Rock many plate glass windows and signs were broken and buildings were considerably damaged. Three people were killed in Pulaski County. More than sixty people were injured throughout the State. Property damage in Pulaski County is estimated at $1,000,000. Damage is estimated at $750,000 in other counties. **B.N.W.**

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Hon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., March, 1942 No. 3

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month was slightly warmer than normal and considerably warmer than March, 1941. The mean temperature for the State was 53.0°, which is 0.4° above the 52 year average. Of the 83 stations reporting temperatures, Magnolia was the warmest with a mean temperature of 59.3°, and Gilbert was the coolest with a mean of 46.8°. Warmer than normal weather prevailed during the first 16 days of the month. The remainder of the month was quite cool with freezing temperatures and killing frost at many places on the 31st. The highest temperature reported was 89° at Magnolia on the 16th, and the lowest was 18° at Irons Fork on the 1st. The warmest weather prevailed from the 13th to 16th, the coolest on the first three days and at the close of the month, all stations recording freezing temperatures during the month.

There were fifteen clear, seven partly cloudy, and nine cloudy days during the month. Sunshine amounted to 71% of the possible amount which is slightly more than the amount received during an average month.

Precipitation averaged slightly less than four inches in Arkansas during March, and was 0.65 inch less than the 52 year average. Considering individual stations, amounts ranged from 0.88 inch at Mountainburg to 7.42 inches at Magnolia. Fourteen stations recorded less than two inches and sixty stations reported over four inches of rain and melted snow. Stations in the eastern districts reported the heaviest amounts of precipitation; those in the northwestern section reported the least. Precipitation was general in most sections on the 1st and 2d, 7th and 8th, 25th and 26th, being quite well distributed through the month.

More snow fell during the month than in any previous March since 1924, averaging two inches for the entire State. Irons Fork measured 15 inches and several other stations measured more than five inches. Practically all of the snow fell on four days, 1st, 2d, 7th and 8th. The snow was very wet and heavy, some of it melting as it fell while the remainder remained on the ground for only a few hours.

The Arkansas River was well below flood stages at all points during the month, although a tributary, the Petit Jean rose to a stage of two feet above flood stage at Danville. The Black River rose to two feet above flood stage at Black Rock on the 16th. The White River was slightly above flood stage at Clarendon most of the month, and slightly exceeded flood stage at Georgetown and St. Charles. The Ouachita River rose to 19.5 feet, 2.5 feet above flood stage at Arkadelphia on March 9th, and 30.2 feet, 4 feet above flood stage at Camden on the 14th. Some bottom land along the Ouachita was inundated, causing some delay in spring farming operations and necessitating some replanting of early crops. Otherwise there was no flood damage of consequence during the month.

The first half of the month was quite favorable for spring farm work and good progress was made in plowing and planting gardens. In the southern sections some garden produce was appearing on the market before the end of the month. The latter half of the month was too cool for the planting and growth of crops and farming operations were considerably delayed. Many stations in the State reported freezing temperature and killing frost on the 31st. **B.N.W.**

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ᵃ,ᵇ,ᶜ, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ¹Precipitation is for the 24-hour period, midnight to midnight. ²Precipitation measured in morning; amount recorded is for the preceding 24 hours. ³Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Hon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., April, 1942 No. 4

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

April opened rather cold, a minimum temperature of 32° or lower being reported at a majority of the stations on the 1st. This cold spell quickly moderated, and the rest of the month was comparatively mild, with temperatures generally above normal. Warm periods occurred around the 4th and 5th, the 16th to 18th, and from the 26th to the end of the month. The warmest days of the month occurred from the 26th to the 30th in southern counties, on the 4th in the northwest. The highest temperature was 88° at three stations, Lead Hill, Corning and Magnolia, on the 4th, 17th and 27th respectively. The lowest temperature was 20° at Gilbert on the 1st. The highest mean temperature for the month was 68.3° at Magnolia and the lowest was 58.1° at Bee Branch. The average for 83 stations was 62.8°, which was 1.3° above the 52 year average.

Precipitation was very heavy in April, averaging 8.42 inches for the State as a whole, which is 3.44 inches above the 52 year average. Totals of ten inches or more were reported from 31 stations. The heaviest rainfall occurred in the southwestern and central portions of the State, while the northern and eastern sides received less. The greatest monthly amount reported from an individual station was 13.44 inches at Sheridan, and the least monthly amount was 4.36 at Subiaco. The greatest 24 hour amount reported was 4.99 inches at the Little Rock Airport on the 8th and 9th. There was an average of ten rainy days over the State as a whole. The periods of heaviest rainfall were between the 6th and 10th, and the 24th and 28th.

Clear days averaged 11, partly cloudy 9, and cloudy 10. Sunshine averaged 62% of the possible amount, which is close to normal.

As a result of the heavy precipitation during the month, all rivers in Arkansas exceeded flood stage. Two rises were experienced on the Arkansas. The first occurred between the 10th and 15th, and the second during the last week of the month.

The Ouachita also experienced two rises, passing flood stage at Arkadelphia on the 9th and again on the 27th. The river exceeded flood stage at Camden on the 10th, cresting at 40.2 feet on the 12th. After a fall to 17.2 on the 24th, it rose again and the stage on the 30th was 32.3 feet.

The lower White passed flood stage at Clarendon on the 14th and St. Charles on the 15th, and was still two feet above flood stage at both stations the end of the month.

Freezing temperatures early in April caused slight damage to blooming strawberries and peach trees. However, the cold weather was of short duration. Corn planting was under way early in the month and some was up by the 15th. The preparation of land for planting cotton progressed well until the heavy rains of the 7th and 8th halted all farm work. Much lowland was flooded, necessitating the replanting of crops. The month ended with much cotton still to be planted. Corn was also late and considerable replanting is necessary. Rice seeding was underway, and alfalfa was being cut. Strawberries were ripening during the last week, but quality was affected by the wet weather.

B.N.W.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated. observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning: amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris: Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Hon, Waldron; Index, Route 5, Texarkana: Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVII LITTLE ROCK, ARK., MAY, 1942 NO. 5

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month was slightly cooler than average and over 3° cooler than May of last year. The mean temperature for 78 stations was 68.0°, which is 1.1° below the average of the past 52 years. The first two days of the month were quite warm but cool weather prevailed thereafter until the 25th, with temperatures below 40° reported on one or two mornings. Much warmer weather prevailed after the 25th. Temperatures were above 90° in the State during the last three days of the month. The highest temperature reported in the State was 100° at Okay on the 30th and the lowest was 36° at Gravette on the 4th. There were 13 clear, 10 partly cloudy and 8 cloudy days during the month. Sunshine amounted to 69% of the possible amount.

Precipitation totaled 3.89 inches during May, which is 0.99 inch below the average of the past 52 years. Rain fell on nearly every day from the 13th to the 19th but after the 22d no rain of consequence fell in the State. The heaviest precipitation occurred in the western sections, the least in the eastern districts. The largest total reported from any station was 10.06 inches at Mammoth Spring and the least was 0.93 inch at St. Charles. About 10% of the stations reported less than two inches and about 40% reported over four inches. The greatest rainfall in 24 hours was 3.67 inches at Prescott on the 14th. There was an average of eight days with rain during the month.

The Arkansas River was rising during the latter part of April and crested several feet above flood stage during the first three days of May. Moderate flood stages were also recorded at Camden on the Ouachita, Black Rock on the Black and Danville on the Petit Jean during May. The lower White River was above flood stage during the first two weeks.

The weather was too cool and wet during the first three weeks of May. Cotton planting made fair progress and was mostly completed by the 20th. Cultivation was delayed by unfavorable weather and fields became quite grassy. More favorable weather during the last ten days permitted much progress in cleaning fields. Corn also suffered from the cool wet weather and was at least two weeks late at the end of the month. Farmers were harvesting a good crop of oats during the latter part of the month. The strawberry crop was also good. Potatoes made good progress and looked good as the month ended. Gardens were also in good shape.

A severe hailstorm occurred in Sevier and Little River counties on May 14th, causing damage of more than $75,000. The storm centered in the Cerro Gordo community and covered an area of about 20 miles. All crops were destroyed and trees were denuded of leaves. Some of the hailstones were reported to be as large as hens eggs.

B.N.W.

H. G. LENHARDT

Mr. H. G. Lenhardt, Cooperative Observer at Lutherville since October, 1924, passed away on May 13, 1942. His long and faithful service to the Weather Bureau and the public without compensation is deeply appreciated.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort SmithWater Plant, Mountainburg; Green Mountain, Calico Rock; Ilon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., June, 1942 No. 6

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The average temperature for the Section was 77.2° which is 0.1° above the average for the past 52 years. The highest temperature reported was 104° at Nashville on the 29th; the lowest 45° at Rogers on the 14th. High temperatures from the last part of May continued generally during the first ten days of June, with daily mean temperatures 4° to 8° above normal, and daily maxima of 90° to 98°. A sharp cool period followed from the 12th to the 19th with daily mean temperatures running 9° to 12° below normal; it was during this period that most of the station minima occurred. Most stations reported the highest temperatures of the month during the period 25th to 30th, in which daily maxima were 95° or higher. Sunshine was 64% of possible.

The average precipitation from 110 stations was 4.54 inches, or 0.47 inch above the average for the past 52 years. Monthly amounts ranged from 1.93 inches at Ozark to 9.91 inches at Mountain Valley. The heaviest monthly amounts fell over the higher terrain of the State; amounts of five to nine inches were recorded in the Ouachita Mountains and the Ozarks, with a secondary high of five to seven inches in the northeastern delta region. Amounts in these sections were from two to five inches above the State average. In that section of the State lying roughly between the Arkansas and the White rivers, monthly amounts were from one to two inches below the State average. Showers and thunderstorms occurred nearly every day over the sections from the 5th to the 17th, with heavy daily amounts at many stations, the greatest being 4.88 inches at Magnolia on the 10th. Showers were general again at the close of the month.

The Ouachita rose somewhat following rains over the watershed on the 10th, but no flood stages were reached. The Arkansas reached flood stage during the period 24th to 28th, but with little or no damage reported.

At the beginning of the month crops were in good condition, making good progress and were fairly clean. Hay crops were in excellent condition, fruit and truck crops were plentiful and in good shape. Some early corn was being laid by but planting of late corn still in progress. The general rainfall and cool weather of the second decade of the month was much needed in the dry northeast, but it practically halted growth of cotton in other sections. Cotton and corn fields were grassy and in need of cultivation. By the close of the month drier and warmer weather permitted adequate cultivation and cotton was making good progress; some squares and blooms being reported. Although some weevil action occurred during the wet weather, conditions were favorable for holding this activity in check at the end of the month, but poison was hard to get.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters a, b, c, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Hon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., July, 1942 No. 7

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The average temperature for this section was 81.1°, which is 0.6 ° above the average for the past 52 years. The highest temperature reported was 105° at Conway on the 31st; the lowest 53° at Gravette on the 23d, and at Russellville on the 28th. High temperature occurred on the 14th, 15th and 16th, and again on the 29th, 30th and 31st. Cool periods occurred the first of the month and again on the 23d and 24th, with most of the minima occurring on the 2d or 23d. The highest monthly mean, 84.6° was recorded at Pine Bluff, but the greatest departure from the normal, +2.6° occurred at Batesville.

The average precipitation from 111 stations was 1.39 inches or 2.38 inches below the average for the past 52 years. This is the least average precipitation for July since 1930. Monthly amounts ranged from 6.60 inches at Heber Springs to none at Index. The rainfall was local shower type with nearby stations varying greatly in amounts with no section indicating a general heavy rain. However, most stations reported rainfall in the period 10th and 11th, and 20th to 22d. Most rainfall was in connection with thunderstorms and many stations reported thunderstorms without precipitation at the station.

The average number of rainy days was 3; clear 17; partly cloudy 11; cloudy 3. Sunshine averaged 84% of the possible amount.

The Arkansas continued to fall throughout the month after being near flood stage the first of the month. All other rivers fell slowly except for slight rises following rainy periods occurring on the 10th and 11th, and the 20th to 22d.

The warm dry weather of July was favorable to most crops. Cultivation and growth of cotton progressed and insect damage was slight due to dry weather. Late corn suffered from lack of rain. Favorable weather prevailed throughout the month for harvesting and threshing small grains, which made excellent yields. Melons and other truck crops were not damaged greatly by the dry weather, but the gardens were deteriorating rapidly by the end of the month. Apples and grapes were needing rain. Peaches are mostly harvested and a good crop was produced. Pastures suffered some from lack of rain and hot weather, but timely light rains during the month kept them in fair condition. Stock water has become scarce in some localities. Haying progressed under excellent conditions. The month was mostly too dry for any except shallow cultivation.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Betheada, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Cozley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3. Nashville Hon. Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Springbank, Doddridge; Stamps Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Mulberry, Route 1, Mulberry; Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

OV 5 1949

WALTER C. HICKMON

Vol. XLVII   Little Rock, Ark., August, 1942   No. 8

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during the month of August were the negative temperature and the positive precipitation departures. Of the stations for which normals have been computed, only six showed positive temperatures and nine negative precipitation departures. Considering the summer months, June, July and August, Arkansas has experienced but five cooler summers during the last 25 years than the summer this year. During the same 25 years but 8 summers have had more rainfall. The summer of 1930 was the hottest and driest in Arkansas during the last 25 years while the summer of 1928 was the wettest.

The mean temperature for the month of August, 1942, was 78.8° which is 1.3° below the seasonal average. The highest monthly mean was 83.6° at Magnolia, the lowest, 73.4° at Turnpike, a difference of 10.3° between the Ozarks in the northwest and the southern sections of the State. Two stations in northwestern Arkansas and four in south Arkansas had positive temperature departures, all others for which normals have been computed showing negative departures. The highest temperature recorded was 106° at Conway on the 1st while the lowest, 53°, occurred at Lead Hill on the 24th, Corning on the 25th and Alum Fork on the 26th. Extremes occurred on approximately these dates in most sections. Temperatures of 100° or higher occurred at 59 stations.

The average rainfall for 110 stations was 5.94 inches which is 2.33 inches above normal. Three northwestern stations, two northeastern and four southeastern showed negative departures while positive departures were recorded elsewhere. The greatest monthly total was 14.87 inches, measured at Springbank. Four stations had monthly totals exceeding ten inches. The least monthly total was 1.83 inches at Ozark. For the most part, the smaller monthly totals were in the Upper Arkansas Valley. The greatest 24-hour amount was 6.76 inches at Springbank on the 23d. The number of days with 0.01 inch or more precipitation ranged from 3 to 14 while the average for 110 stations was 9. The average number of clear days during the month for the 110 stations was 11, partly cloudy 12, and cloudy 8. Sunshine was 76% of the possible amount.

Following a hot dry July, soil moisture was badly depleted at the first of the month and early corn was damaged beyond recovery in many localities, rains in August coming too late to materially help early corn. Cotton was not seriously hurt, but frequent showers favored weevil and worm activity. For the month as a whole cotton made fair progress and at the close of the month was opening in upland sections of the State and in the southeast, and picking and ginning were beginning. Late corn made excellent progress. Fall crops, meadows, pastures and fruit improved. Rice was heading and cutting of early varieties was beginning at the close of the month. Some hay was damaged by the frequent showers. Fall plowing was in progress at the close of the month, soil moisture being ample throughout the State. All streams were at moderate stages throughout the month and no flood losses occurred.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., September, 1942 No. 9

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

September temperatures averaged 3.1° below normal in Arkansas. Temperatures were above normal nearly every day until the 20th, when a cold polar air mass spread over the State, resulting in much colder weather during the remainder of the month. On some days during the last decade temperatures averaged from 15° to 20° below normal. Many stations reported the lowest September temperatures of record on the 27th, 28th or 29th, with killing frost at some stations in the northwestern counties, and light to heavy frost in other portions of Arkansas. There was considerable frost damage to beans, tomatoes and late potatoes in some northwestern counties but in the central and southern sections damage was negligible. The lowest temperature recorded in Arkansas during September was 28° at Gravette on the 27th. Over one-third of the stations recorded freezing temperatures on one or more mornings during this cold spell. The highest temperature reported was 100° at Okay on the 12th. Practically all stations reported temperatures of 90° or higher on several days. There was ample sunshine for crops.

While precipitation averaged slightly above normal for the State as a whole, amounts varied considerably in different sections. Many stations in the eastern half of Arkansas measured less than two inches. In the northwestern section precipitation ranged from three to over five inches. Rainfall of seven to ten inches occurred in those southwestern counties lying between the Red River and the headwaters of the Ouachita River. Most of this rain fell from the 6th to the 9th, when several stations measured from three to six inches in 24 hours. These excessive rains caused flood stages on the Little Missouri and Ouachita Rivers, resulting in damage to crops in the lowlands. The most precipitation measured during the month was 10.44 inches at New Hope, the least was 0.35 inch at Warren. The greatest amount measured in 24 hours was 6.07 inches at Nashville on the 9th. There was an average of 7 rainy days, 15 clear, 8 partly cloudy and 7 cloudy days during September.

Except for the rainy period from the 6th to the 9th, September weather was very favorable for haying and harvesting, but too dry in some sections for growth of late crops and gardens. Cotton was being picked early in the month and picking was in full progress by the 15th. Corn was maturing and being gathered during the latter part. Fall plowing and the seeding of winter grains advanced normally. As the month ended the soil was becoming quite dry in many sections of the State and good rains were needed.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a,b,c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Highland, R.F.D.3, Nashville; Hon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Springbank, Doddridge; Stamps Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Mulberry, Route 1, Mulberry; Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., October, 1942 No. 10

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

October weather was close to normal, both in temperature and precipitation, for the State as a whole. The mean temperature was 62.8°, which is exactly normal for the month. At individual stations, mean temperatures ranged from 68.2° at Portland to 58.6° at Siloam Springs. The lowest temperature reported in the State was 22° at several northwestern stations on the 26th. The highest was 90° at five stations on several days. Warm periods prevailed on the first few days of the month and again from the 12th to the 20th. Cool weather was general after the 21st. On the 26th and 27th freezing temperatures and killing frost occurred over much of Arkansas.

Precipitation was about average during October. However, there were only five rainy days and precipitation was light until the 29th and 30th, when heavy to excessive rains occurred over most of Arkansas. Many western and northern stations reported over three inches of rain in 24 hours. Rogers recorded 6.72 inches on the 30th. These heavy rains caused the Arkansas River to reach flood stages early in November in the western portion of the State.

During most of the month ideal weather aided farmers in harvesting and other outside activities. Cotton picking and corn gathering progressed rapidly and were nearly completed by the end of the month. Towards the latter part the soil was becoming quite dry and forest fires were springing up. Some butchering was accomplished during the cool weather.

A devastating tornado struck Berryville, Carroll County, at 10:30 p.m. on October 29th, killing 29 people, injuring over 100 persons and rendering over 600 homeless. About 137 homes and other buildings were totally destroyed and 65 other buildings sustained major damage. The path of the tornado was approximately one half mile wide and one and one half miles in length, and moved slightly north of east over the northern section of Berryville. It it thought that property damage was at least $500,000. About 5:40 p. m. of the same date, a tornado struck the southeastern section of Mena, Polk County, moving from the southwest towards the northeast. The width of the tornado was about 100 yards. No one was killed or injured. Damage to buildings is estimated at $15,000. Heavy rain and tornadic winds caused some property damage in Rogers, Benton County, on the same date. Other communities reporting damage from this storm were Newport, Jackson County, where some buildings were unroofed and several people slightly injured; and near Morrilton, Conway County, where high winds caused property damage of about $5,000.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a,b,c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:--Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Camp Marion, Route 1, Little Rock; Clover Bend, Hoxie; Corley, Paris; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville Hon, Waldron; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Springbank, Doddridge; Stamps. Odell, Route 1, Canehill; Pottsville, Route 1, Russellville; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Mulberry, Route 1, Mulberry; Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., November, 1942 No. 11

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

This month was the warmest November in eleven years, and one of the warmest on record. The mean temperature was 54.5° for the entire State, which is 3.2° above normal. The first half of the month averaged somewhat cooler than normal but from the 16th to the 21st, unseasonably warm weather prevailed with daily temperatures ranging from ten to twenty degrees above normal. The coldest weather of the month occurred after the 21st, when all stations experienced freezing temperatures and a few reported temperatures as low as 20°. Extreme temperatures during November ranged from 88° at Wabash on the 18th to 18° at Mount Ida on the 27th. Sunshine averaged about normal as did the number of clear, partly cloudy and cloudy days. There were no destructive windstorms nor damage from hail or ice storms.

Precipitation averaged close to normal for the State as a whole, although there was considerable variance between different sections of Arkansas. Stations located in the northern and northwestern counties recorded from five to more than eight inches of rainfall, while many stations in the southern and southwestern districts measured less than two inches. For example, Eureka Springs measured 8.74 inches during November, and Texarkana recorded only 0.64 inch. The heaviest rainfall in 24 hours was 4.47 inches at White Rock on the 4th and 5th. There was an average of eight days with precipitation. Light snow flurries were observed at three northwestern stations on the 22d. Heavy rains on the 4th and 5th resulted in rises on the Arkansas and White rivers, but flood stages were not reached. The lower White was at quite high stages during most of the month.

The weather was favorable for outside farm work during November. Ample rainfall in the northern and northwestern districts replenished soil moisture and was beneficial for the growth of winter grains and grasses. Most of the cotton had been picked and corn gathered before the 15th. Other farm activities, such as digging potatoes, threshing peanuts and rice and harvesting spinach continued during the month. Considerable butchering was done during the cold weather of the last week. Killing frosts occurred throughout the State during November. With sufficient feed, livestock was in good condition.

B.N.W.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ᵃ,ᵇ,ᶜ, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII Little Rock, Ark., December, 1942 No. 12

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The mean temperature for the month of December, as determined from the records of 79 stations, was 42 7°, which is 0.2° below the average of the past 52 years. The first half of the month was quite cold with subnormal temperatures prevailing almost every day until the 14th. The lowest temperatures of the month occurred during this period, with freezing weather throughout the State. After the 14th, cool and mild weather alternated frequently but with warm weather predominating. The warmest days of the month were the 25th and 26th when temperatures exceeded 70° at most stations and reached 80° at Crossett on the 25th. The lowest temperature recorded in Arkansas during December was 16° at Corning on the 14th. Fifteen stations reported minima below 20° on one or more days. Sunshine was somewhat deficient, due to the prevalence of cloudy days.

The average precipitation for December, as determined from the records of 109 stations, was 4.87 inches which is 0.65 inch above the average of the past 52 years. The greatest rainfall recorded at an individual station was 8.86 inches at Crossett, the least monthly amount was 1.94 inches at Cold Springs. The greatest rainfall in 24 hours was 4.60 inches af the Fort Smith Water Plant, Mountainburg, on the 27th. Light snow fell during the first week but did not remain on the ground more than a few hours.

Heavy rains were general throughout the State on the 26th and 27th and caused marked rises in all the rivers. The White and Black Rivers went above flood stages during the latter part of December and the first part of January.

High winds occurred throughout the State on the night of the 26th, causing minor property damage in many localities. The greatest damage occurred in Stuttgart and vicinity where a number of buildings were damaged by wind and contents damaged by heavy rain. There was some flooding in the lower section of the city. West of the city, power and telephone lines were blown down for a distance of several miles. At Jonesboro a 25-foot stretch of brick wall was blown over.

The cold, wet weather during the first half of December was unfavorable for outside farm work However, the cold weather was welcomed by farmers who wanted to butcher. The period from the 15th to 27th was much more favorable for plowing, threshing peas, baling rice straw, spinach cutting and other farm activities. Winter grains made good progress during the month.

B.N.W.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort SmithWater Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVII   Little Rock, Ark., Year, 1942   No. 13

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged slightly below normal in Arkansas during the year. The annual mean temperature for the State was 61.0°, compared to the 52 year average of 61.4°. January, February and September had the largest deficiencies in temperature while November had the greatest temperature excess. The coldest month of the year was January with a mean temperature of 38.1°, the warmest was July with a mean of 81.1°. Freezing weather occurred in all months except May, June, July and August. The highest temperature of the year was 106° at Conway on August 1st, the lowest was —21° at Corning and Mammoth Spring on January 8th. The coldest weather of the year occurred on January 8th when approximately half of the stations in Arkansas experienced subzero temperatures. Considering individual stations, Magnolia had the highest annual mean temperature with an average of 65.2° and White Rock the lowest with a mean of 56.5°.

The date of the last killing frost in the northern and western sections was April 1st at most stations and the first killing frost in autumn was October 26th. In the southeastern section the frost-free period extended from March 28th to November 27th. The length of the growing season in 1942 was therefore slightly longer than in an average year.

Annual precipitation totaled 49.71 inches for the State, which is 1.54 inches above the 52 year average. April was the wettest month with a total of 8.42 inches. In July, the driest month, precipitation averaged 1.39 inches. Index measured no rain whatever in July and White Cliffs recorded only a trace. Sheridan reported 13.44 inches in April and Springbank 14.87 inches in August. During a 24 hour period ending at 7 a. m. on August 23d, 6.76 inches of rain was measured at Springbank. From April 6th to May 6th, rain fell in the State almost every day. The greatest annual precipitation reported was 62.64 inches at Mammoth Spring, the least was 36.28 inches at Waldron. Only four stations reported less than forty inches. Annual snowfall averaged 8.3 inches for Arkansas, the greater portion falling during January. Measurements varied from 24 inches at Irons Fork to a trace at Arkansas City.

Several tornadoes occurred in Arkansas during the year. On February 5th, a series of tornadoes occurred over the State, tornadic winds being reported in Pike, Clark, Garland, Hot Spring, Sheridan, Saline, Arkansas and Pulaski counties in the central section, and in Carroll and Randolph counties in the northern part of the State. Property damage was quite extensive, especially in and near Little Rock, where three people were killed and property damage was estimated at $1,000,000. The tornadoes caused about $750,000 damage in other counties. On October 29th, a devastating tornado struck Berryville, Carroll County, killing 29 people, injuring over 100 persons and destroying or damaging many buildings. Property damage exceeded $500,000. On the same date high winds damaged property in Mena, Rogers, Newport and Morrilton.

(Continued on page 78)

A severe hailstorm occurred in Sevier and Little River counties on May 14th and destroyed growing crops valued at more than $75,000. The storm covered an area of about 20 square miles.

ARKANSAS RIVER

The first flood stages of the year occurred about the middle of April. After falling somewhat during the next few days, further rains forced the river to the highest stages of the year during the last few days of April and early in May. Although the river exceeded flood stage by several feet in the western part of the State, it did not crest as high as in November, 1941. Another rise occurred late in June with crests slightly above flood stage in the western part of the State. Moderate rises occurred again during the first part of November and the latter part of December, but flood stages were not reached.

WHITE AND BLACK RIVERS

The lower portion of the White River was at high stages throughout January, February and March, reaching flood stages occasionally. The Black River was in flood early in January and again about the middle of March. Both the White and Black rivers rose to flood stages about April 10th and the resulting discharge kept the lower portion of the White at high stages until June. The last rise of the year occurred late in December. As the year ended the upper White was considerably above flood stage and the lower White was rising.

OUACHITA AND RED RIVERS

The Ouachita River rose to flood stages four times during the year, once in March, twice in April and once in May. The highest stages were reached in April with a reading of 26.8 feet at Arkadelphia on the 9th and 40.2 at Camden on the 12th.

The Red River was above flood stage at Index and Fulton for about a week beginning April 11th, and again from April 23d to May 5th.

WEATHER BY MONTHS

January:—Somewhat colder and drier than average. A severe cold wave overspread the State about the 8th, with temperatures as low as —21°. Snowfall was above average and afforded some protection to grains and grasses during this cold spell. Some damage to fruit trees by low temperature.

February:—The second coldest February since 1914 although extreme temperatures were not as low as in January. Precipitation was only slightly below normal and was well distributed. Snowfall was light. A series of tornadoes occurred on the 5th from Pike County northeastward to Randolph County. Three people were killed, about 60 injured and property damage exceeded one million dollars.

March:—The month was warmer than normal although the latter half was quite cool, with freezing temperatures and killing frosts at many places on the 31st. More snow fell this month than in any March since 1924. The first half of the month was favorable for farm work but cool weather delayed activities during the latter half. Some garden produce was appearing on the market in southern counties.

April:—Rather cold at the beginning with freezing temperatures in most sections on the 1st. However the month averaged warmer than normal. Precipitation was the heaviest in 15 years with one station reporting over 13 inches. Corn planting began early in the month with some up by the 15th. Cotton planting was delayed with much to be planted as the month ended. Much replanting of crops on lowlands was necessary due to floods.

May:—The month was slightly cooler and drier than normal. Cool, wet weather delayed growth and cultivation of crops during the first three weeks and fields became quite grassy. An excellent strawberry crop was marketed. A severe hailstorm did considerable damage to crops in Little River and Sevier counties on the 14th.

June:—Both temperature and rainfall averaged near normal. Progress of corn and cotton was delayed by the cool wet weather of the second decade and fields became grassy.

(Continued on page 79)

July;—The month was warm and quite dry. This was the driest July since 1930, with many stations reporting less than an inch of precipitation and one station reported none. Dry weather aided in keeping cotton fields clean and controlling insects, and in harvesting hay and grains. Gardens and fruits suffered in some sections.

August;—Cool, wet weather characterized the month. Heavy rains replenished soil moisture which was badly depleted during July. Cotton made fair progress although weevil activity increased. Cotton was opening in the upland sections and picking and ginning were beginning in the southeast. Early varieties af rice were being cut.

September:—The month was quite cool but precipitation was close to normal. Unseasonably cold weather prevailed during the last decade and killing frost did some damage to staple crops in northwestern sections. Precipitation was generally light in the eastern half and above normal in the western section of the State. Conditions were generally favorable for haying and harvesting but too dry in some sections for the growth of late crops and gardens. Cotton picking was in full progress by the 15th. Corn was maturing and being gathered during the latter part.

October:—Temperatures and precipitation averaged about normal. Freezing temperatures and killing frost occurred over much of the State on the 26th and 27th. A good portion of the month's precipitation occurred on the 29th and 30th. On the 29th a severe tornado occurred in Berryville, killing 29 people, injuring over 100 persons and destroying many buildings. Property damage exceeded $500,000. High winds and heavy rains caused considerable damage in other communities on the same date. Cotton picking and corn gathering progressed rapidly and was about completed by the end of the month.

November:—The warmest November in 11 years and one of the warmest on record. Cool weather prevailed after the 21st with temperatures as low as 18°. Precipitation was quite heavy in the northern and light in the southern sections. Favorable weather aided outside farm work. Considerable home butchering was done during the cold weather of the last decade.

December:—Cold, wet weather prevailed during the first half of the month but after the 15th temperatures averaged above normal and conditions generally were much more favorable for outside work. High winds and heavy rains on the night of the 26th caused minor property damage in many localities and resulted in sharp rises in the rivers of the State. B.N.W.

*Indicates freezing temperature, no killing frost reported.

Departures from normal temperature are computed from averages of entire period for stations having 10 or more years record. Departures of precipitation with 15 years or more record are computed from a normal or "standard mean," adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive. T., less than 0.01 inch rain or melted snow. Reference letters ª, ᵇ, ᶜ, appearing in the table indicate number of days missing. § Also on later dates. †Post-office addresses of these stations as follows: Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Springs, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Rt. 1, Ravendon Springs; Fordyce, Rt. 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Heber Springs, Tumbling Shoals; Highland, R.F.D. 3, Nashville; Huttig, Felsenthal; Index, Route 5, Texarkana; Irons Fork, Exp. ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII Little Rock, Ark., January, 1943 No. 1

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged very close to normal in the State during January. Mild weather prevailed from the 1st to 3d, 14th to 16th, 21st to 24th, 30th and 31st. The warmest period was from the 22d to 24th, when temperatures averaged more than 20° above normal and daily maxima were above 80° at some stations. The coldest weather occurred from the 18th to 20th, with sub-zero temperatures in the extreme northwestern section and around 10° in the southeastern counties. However, this cold wave was not as severe as the one in January, 1942, when temperatures of —20° were experienced. There was ample sunshine.

Although there have been months in the summer and autumn with less precipitation, this month was the driest January of record. Measurable amounts of precipitation fell on only four days, 6th, 7th, 25th and 26th. All stations reported deficiencies. Only stations in the extreme southern counties reported more than two inches of precipitation. In the northern section most stations recorded less than one-half inch and several less than one-tenth inch. Two stations reported only a trace and one station reported none. Practically all the precipitation was in the form of sleet or snow in the northern section. During the night of the 25th, considerable sleet and freezing rain fell, resulting in hazardous driving conditions on the highways for about two days.

As a result of heavy rains late in December, the White River was in flood at Batesville and Newport during the first few days of January and at Clarendon until the 24th. Other rivers were at moderate or low stages.

The cold weather caused no serious damage to fruit trees and retarded premature budding. The spinach crop in the Fort Smith area suffered considerable damage from the cold. Some plowing was accomplished during the mild periods and oats were being planted during the latter part of the month. Winter grains survived the cold weather in good condition.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 79 stations, was 41.8°, which is 0.6° above the 53-year normal for January. The highest monthly mean was 50.6° at Magnolia, Columbia County, and the lowest was 36.0° at Bentonville and Siloam Springs, Benton County. The highest temperature recorded during the month was 87° at Crossett, Ashley County, and Mount Ida, Montgomery County, on the 23d. The lowest during the month was —9° at Devils Knob, Johnson County, Gravette and Rogers, Benton Co., on the 19th.

PRECIPITATION

The average precipitation from rain and melted sleet and snow for the State, as determined from the observations at 110 stations, was 1.00 inch, which is 3.31 inches less than the 53-year normal for January. The greatest monthly amount was 4.36 inches at El Dorado, Union County, while the least was none at Siloam Springs, Benton County. The greatest amount recorded in any 24 consecutive hours was 2.37 inches at El Dorado on the 7th.

The average snowfall for the State was 1.2 inches which is 0.7 inch below the 52-year average. The greatest total snowfall for the month was 5.2 inches at Blytheville, Mississippi Co.

B.N.W.

MISCELLANEOUS PHENOMENA

High Winds:---2. 3,6,9,14,15,16,18,19,20,21,22,23,24.25.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated. observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake. Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Ohio; Devils Knob, Salus; Eagle Gap. Eagleton; Eleven Point, Route 1. Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVIII LITTLE ROCK, ARK., FEBRUARY, 1943 No.2

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

The month was considerably warmer than an average February, and was the warmest in five years. Mild weather prevailed during the first 10 days and again from the 18th to the 24th. The coldest weather occurred from the 13th to the 17th with most stations experiencing their lowest temperatures on the 15th or 16th. These minima were 20° or lower at most stations. Sunshine was considerably above normal.

This was the driest February since 1895 and the second driest on record. Incidently, the total average precipitation for January and February amounted to 2.00 inches. With the exception of June and July, 1930, with a total of 1.61 inches, and September and October, 1891, with a total of 1.59 inches, no similar period has been as dry. Only about one third of the stations reported more than an inch of precipitation. The heaviest precipitation occurred in the southern counties but even in those sections, it was less than normal in most instances. There was an average of only three days during the month with precipitation. Snowfall was light and occurred on only one day, the 14th. Rivers were at low stages or falling throughout the month.

The dry weather favored farm work, although in many sections, dry soil retarded spring plowing. Oats, early potatoes and other crops were being planted during February. However, germination was delayed because of the drought. Fruit trees were being pruned and sprayed. Strawberry plants suffered from the lack of moisture. At the end of the month, cherry trees were blooming and peach trees were budding.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 81 stations, was 47.5°, which is 3.9° above the 53-year average for February. The highest monthly mean temperature was 53.6° at El Dorado and the lowest was 42.6° at Gilbert. The highest temperature recorded was 83° at Benton on the 9th, the lowest was 7° at Lead Hill and Turnpike on the 16th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 111 stations, was 1.00 inch, which is 2.36 inches below the 53-year average for February. The greatest monthly amount was 3.87 inches at Crossett and the least was 0.16 inch at Clover Bend. The greatest amount reported in any 24 consecutive hours was 2.27 inches at Whitecliffs on the 2d.

The average snowfall for the State was 0.4 inch. which is 1.4 inches below the average of previous years. Amounts varied from three inches at Green Mountain to none at many stations.

B.N.W.

MISCELLANEOUS PHENOMENA

Dates of

High Winds:---5,9.
Sleet:---10,11.
Hail:---10,20.
Thunderstorms:---2,3,10,20,21.
Dense Fog;---18,19,20,21,28.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated. observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1] Precipitation is for the 24-hour period, midnight to midnight. [2] Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3] Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus: Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock: Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVIII LITTLE ROCK, ARK., MARCH, 1943 No.3

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during March were the positive precipitation and negative temperature departures. This was the first month in Arkansas with a negative temperature departure since September and the first with a positive precipitation departure this year, January and February having been exceptionally dry, January being the driest on record and February the driest since 1895, and the second driest on record.

The month opened with temperatures below normal, the lowest for the month occurring over most of the State on the 3d. Daily means continued below normal until around the 14th when there was a three day period of moderately warm weather, but thereafter daily means were again below normal until the 26th, following which warmer weather continued until the close of the month. Every station for which normals have been computed showed temperatures below normal for the month and the March mean was 0.6° lower than that recorded during February. All previous low temperature records for March were broken, this being the first March in which sub-zero temperatures have been recorded in Arkansas.

This was the wettest March since 1938, precipitation occurring on an average of ten days during the month, numerous stations reporting 13 or 14 rainy days. A flood occurred on the lower Ouachita with a stage of 32.4 feet at Camden on the 18th. The cold wet weather interferred with all farming operations and much of the Elberta peach crop was killed by the low temperature on the 3d. Extensive damage to early planted truck, gardens and spinach also resulted. The closing days of the month were more favorable. Winter wheat, oats and and rye improved. Seeding of alfalfa and spring oats continued. Soil moisture was ample at the close of the month. The season was backward and farmers behind with their work.

TEMPERATURE

The mean temperature for March, as determined from the records of 81 stations, was 46.9° which is 5.6° below the 53-year average. The highest monthly mean was 52.4° at Portland, Ashley County, the lowest 40.6° at Gilbert, Searcy County, a difference of 11.8° between the Ozarks in the northwest and the lowlands in the southeast. Extremes ranged from 6° below zero at Siloam Springs on the 3d to 84° at four stations on the 29th and 30th. There were 8 stations reporting subzero temperatures: Bentonville, Devils Knob, Fayetteville Experiment Station, Harrison, Lead Hill, Rogers, Siloam Springs and Turnpike, all on the 3d.

PRECIPITATION

The average precipitation, as determined from the records of 111 stations, was 5.66 inches which is 1.04 inches above the 53-year average. The greatest monthly total was 10.61 inches at Wabash, Phillips County, the least, 2.15 inches at Siloam Springs, Benton County. All stations for which normals have been computed showed positive departures, except those in the northwestern section of the State. The greatest 24 hour amount was 4.54 inches at Okay, Howard County on the 11th and 12th. The average number of rainy days was 10.

MISCELLANEOUS PHENOMENA
Dates of

High Winds:---1,2,4,6,9,10,15,16,19,20,30,31.
Glaze:,--5,6.
Sleet:---2,4,5,6,19.
Hail:---15,16,18,19.
Thunderstorms:---5,10,11,12,13,15,16,18,19,26,31.
Dense Fog:---1,5,10,11,12,13,18,19,26.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 0 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Pos office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ᵃ,ᵇ,ᶜ, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ¹Precipitation is for the 24-hour period, midnight to midnight. ²Precipitation measured in morning; amount recorded is for the preceding 24 hours. ³Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII Little Rock, Ark., April, 1943 No. 4

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged somewhat above normal during April, and precipitation was somewhat below, but there were no record breaking extremes. Of the stations for which normals have been computed, all except six showed positive temperature departures, and all except four showed negative precipitation departures.

The month opened with temperatures above normal and daily means continued near or above the seasonal average until around the 12th when a moderately cool wave overspread the State, the lowest for the month occurring in most sections about the 15th, with heavy to killing frosts and freezing temperatures at numerous stations. Moderately cool weather continued until about the 23d, when there was a return to seasonable temperatures and by the close of the month daily means were about 10° above normal.

Showers were rather frequent during the first 17 days of the month, but thereafter little or no rain occurred over much of the State and at the close of the month dry soil was interferring with germination and growth of crops. Strawberries were ripening at the close of the month, but the crop was damaged by the low temperatures around the middle of the month and by the dry weather of the last two weeks. Early planted cotton came up to poor stands and much will have to be replanted. Corn planting made fair progress and cultivation was under way at the close of the month. Oats, lespedeza, alfalfa and all hay crops made good growth. Potatoes and gardens made fair progress the last half of the month.

Following the heavy rains on the 16th and 17th the Ouachita and Little Missouri Rivers exceeded flood stages at Arkadelphia, Camden and Boughton, Arkadelphia being slightly above flood stage on the 19th, Camden from the 20th to 26th, and Boughton on the 19th and 20th. Prevailing wind was from the South. There were 15 clear days during the month, 8 partly cloudy, 7 cloudy and 7 with a measurable amount of precipitation. Sunshine was about 69% of the possible amount.

TEMPERATURE

The mean temperature for the State, as determined from the records of 81 stations, was 62.9°, which is 1.4° above the 53-year average. Bee Branch, Blytheville, Crossett, England, Marked Tree and Morrilton were the only stations reporting a monthly mean temperature below normal. The highest monthly mean was 67.1° at Texarkana, the lowest 59.7° at Gilbert. The highest temperature recorded was 95° at Benton on the 11th, the lowest 25° at Clover Bend, Gilbert, Lead Hill and Mount Ida on the 15th.

PRECIPITATION

The average precipitation for 111 stations was 3.20 inches which is 1.73 inches below normal. The greatest monthly total was 5.03 inches at Highland, the least, 1.06 inches at Crossett. Only four stations showed a positive precipitation departure, Fort Smith, Highland, Madison and Russellville. The greatest 24-hour amount was 4.00 in. at Highland on the 17th.

MISCELLANEOUS PHENOMENA
Dates of

High Winds:---4,7,9,11,12,13,14,15,16,19,23.
Sleet:---3,13.
Hail:---1,5,11,12.
Thunderstorms:---1,3,5,6,8,9,11,12,13,16,17,21,22,23,25,26,27.
Dense Fog:---9,10,11,16,17,22.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 0 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters a, b, c, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated. observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ¹Precipitation is for the 24-hour period, midnight to midnight. ²Precipitation measured in morning; amount recorded is for the preceding 24 hours. ³Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVIII LITTLE ROCK, ARK., MAY, 1943 No. 5

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The weather in Arkansas during May, 1943, was marked by a wide range in temperature and rainfall, the rainfall particularly being worthy of special mention and study since a disastrous flood occurred on the Arkansas, White and Black rivers.

Of the stations for which normals have been computed, all except three showed positive temperature departures, monthly means ranging from 64.8° at Turnpike to 76.4° at El Dorado, a difference of 11.6° between the Ozarks and the southern border of the State.

Precipitation totals ranged from 1.36 inches at Monticello to 19.03 inches at Rogers. There were 32 stations in northwest Arkansas reporting monthly totals exceeding ten inches, while 21 stations showed negative precipitation departures. While Rogers had the heaviest rain, Siloam Springs with 18.51 inches was a close second, and Bentonville and Gravette with 16.89 and 16.48 inches respectively, followed. These are the greatest monthly totals on record at these stations.

An appreciable amount of rain did not occur until the 7th when light amounts were measured at numerous stations. The rain period from the 7th to the 11th initiated the flood, the greatest 24-hour amount for the month occurring in most sections between the 9th and the 11th. During this period Rogers measured 13.09 inches, 6.14 inches and 6.21 inches occurring on two consecutive days; Bentonville measured 11.56 inches, and Odell, Fort Smith and Siloam Springs measured over ten inches. Many northwestern stations had only slightly lower amounts. There was little rain from the 12th to the 15th, but thereafter amounts were again heavy, a few stations reporting 24-hour amounts as late as the 22d, 23d, 29th and 30th.

The excessively heavy rains from the 8th till the 11th brought floods to the Arkansas, White and Black rivers, and the heavy rains of the last decade brought a second crest on the Arkansas and Upper White. Stages higher than those recorded in April 1927 were reported at Ozark, Dardanelle and Pine Bluff on the Arkansas, and at Ozark Beach, Mo., and Georgetown on the White. The first rise on the Arkansas was rapid, as much as 21 feet in 24-hours at one point. No statistics have yet been compiled as to flood loss, but it will be excessive.

While a disastrous flood occurred in the lowlands of the Arkansas, White and Black, destroying crops and preventing farm work, in southern sections of the State several counties reported little rain during the preceding six weeks, the soil being too dry for the germination and growth of crops. In upland sections cotton made fair progress and chopping was under way. By the close of the month some early corn was laid by. A short strawberry crop was harvested. Oats were maturing and cutting was in progress at the close of the month. Meadows, pastures and alfalfa made excellent growth. Rice was planted and irrigated. Potatoes, peanuts and other minor crops made fair progress outside flooded areas.

TEMPERATURE

The mean temperature for the State, as determined from the records of 81 stations, was 71.0°, which is 1.8° above the 53-year average. Bee Branch, England and Highland were the only stations reporting monthly mean temperatures below normal. The highest monthly mean was 76.4° at El Dorado, and the lowest was 64.8° at Turnpike. The highest temperature recorded was 95° at Dardanelle on the 2d, and at Dumas on the 5th. The lowest was 38° at Lead Hill on the 1st, at Gravette on the 2d, and at Highland on the 4th. The highest minimum temperature for the month was 56° at El Dorado on the 26th.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 0 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort SmithWater Plant, Mountainburg; Green Mountain, Calico Rock; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turupike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII Little Rock, Ark., June, 1943 No. 6

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

With a mean temperature of almost 3° above normal for the State as a whole, this was the warmest June since 1936. Temperatures were above normal continuously from the 1st to 28th, with much cooler weather prevailing on the last two days. Unusually low minima were recorded at some stations on the morning of the 30th. The hottest weather of the month occurred from the 19th to 22d. Several stations reported temperatures of 100° or slightly higher on those days. Temperatures averaged above normal at all stations and almost 5° above at Pine Bluff. There was an adequate amount of sunshine.

Precipitation was somewhat deficient, averaging 71 % of normal for the State as a whole. This was the driest June since 1936. Although the average rainfall for the State was slightly less than three inches, a few stations in the northern sections of the State recorded over five inches, and several stations in the southern districts measured less than an inch. As would be expected where practically all of the precipitation resulted from afternoon thundershowers, there was considerable variation in the amount of rainfall received by different stations in the same county. For example, the total for the month at Camp Robinson was 0.98 inch, and at Little Rock, 2.81 inches. No damage was reported from hailstorms in the State. Light southerly winds prevailed.

Some of the rivers in the State were still in flood stage early in June as a result of the May floods but were receding most of the month. The lower reaches of the White River continued in flood until about the 25th.

The weather was generally favorable for crop growth, although lack of sufficient moisture in many localities caused considerable deterioration in truck crops, gardens and pastures during the latter half of the month. The weather was especially favorable for cotton, and the crop made good progress all month. Chopping was completed in most sections by the 25th, and the dry weather discouraged weevil activity. Corn also advanced favorably and was tasseling at the close of the month. Good crops of beans and potatoes were harvested. Considerable bottom land in the Arkansas River Valley was replanted in soybeans, corn, and hay during June. However, much land in the Valley cannot be replanted this year because of erosion and sand deposits from the May floods. B.N.W.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 80 stations, was 79.8°, which is 2.7° above the 53-year average for June. The highest monthly mean temperature was 84.1° at Pine Bluff and the lowest was 72.9° at Devils Knob. The highest temperature recorded was 102° at Portland on the 20th and Pine Bluff on the 21st, and the lowest was 47° at Lead Hill on the 30th

PRECIPITATION

The average precipitation for the State, as determined from the records of 110 stations, was 2.86 inches, which is 1.19 inches below the 53-year average for June. The greatest monthly amount was 7.42 inches at Mountainburg and the least was 0.10 inch at Index. The greatest amount reported in any 24 consecutive hours was 2.62 inches at Pine Ridge on the 27th and 28th.

MISCELLANEOUS PHENOMENA

Dates of

High Winds:---1,2,3,4,6,8,17,23,28.
Hail:---4,5,8,16,17,19.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 0 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Pos office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fôrdyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVIII LITTLE ROCK, ARK., JULY, 1943 No. 7

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during July, 1943, were the positive temperature and negative precipitation departures. This was the hottest July since 1936, when the monthly mean temperature was 83.3°, 0.4° higher than this month. The record hot July was in 1934 when the temperature averaged 85.5°. The highest July temperature was in 1936, 114° at Booneville on the 18th. This month every station in the State reported 100° or higher except Turnpike which had only 99°. The average number of days with 100° or higher was 9. The greatest number recorded was 21 at Conway.

The month opened with daily mean temperatures below normal and during the first half of the month there were occasional days with temperatures near or slightly below normal, but during the latter half of the month temperatures were uniformly high, most of the 100° and higher occurring during this period. Every station for which normals have been computed showed a monthly mean temperature above normal except Crossett, where the departure was —0.2°. For the second month in succession Pine Bluff reported the highest mean temperature in the State.

This was the driest July since 1930, when an average of only 0.74 inch of rain occurred and is the second driest on record. There were four stations that did not have an appreciable amount of rain during the month. Rain was not confined to any definite periods during the month, but occurred at infrequent intervals.

The last two months have had only approximately 50% of the normal rainfall. May was a very wet month and all crops were shallow-rooted and all suffered from the hot dry weather of July. Cotton made fair progress throughout the month despite the hot dry weather and at the close of the month the crop was clean and well cultivated, blooming and fruiting, and some bolls were opening in extreme southeastern sections of the State. The weather was favorable throughout the month for holding boll weevil in check. Corn was badly damaged by the hot dry weather and was in poor condition in most sections at the close of the month. Peanuts made fair growth. Potatoes rotted in the fields at digging time because the market was glutted, labor scarce and price low. The commercial bean crop was cut short by the dry weather. Melons were plentiful at the close of the month, meadows and pastures brown. All minor crops deteriorated because of the high temperatures and insufficient soil moisture. Unless copious rains fall soon, there will be slight hope for even fair crops this fall.

TEMPERATURE

The mean temperature for the State, as determined from the records of 79 stations, was 82.9°, which is 2.3° above the 53-year average for July. The highest monthly mean temperature was 86.7° at Pine Bluff and the lowest was 79.0° at White Rock. The highest temperature recorded was 110° at three stations, Batesville Airway, Conway and Ozark on the 22d. The lowest was 47° at Batesville Livestock station on the 1st.

PRECIPITATION

The average precipitation for the State, as determined from the records of 108 stations, was 1.13 inches which is 2.59 inches below the 53-year average for July. The greatest monthly total was 4.50 inches at Prescott. Waldron recorded no rain, Big Lake Outlet, Blytheville and Georgetown only a trace. The greatest amount recorded in any 24-hour period was 3.22 inches at Prescott on the 14th. The average number of rainy days was 4.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 0 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Pos office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T, Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:--Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Springs, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII　Little Rock, Ark., August, 1943　No. 8

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

August was the hottest month since 1936, and the fourth hottest on record. Maximum temperatures averaged above 100° at many stations. Temperatures at Little Rock reached 100° or higher on 17 days, and at several other stations 100° was reached or exceeded on 25 days. The only relief from the extremely hot weather occurred from the 17th to 20th, when temperatures were from 10° to 20° lower.

The month was very dry, the average precipitation for the State amounting to only 29% of normal. All stations, with the exception of Portland and Madison, reported less than normal amounts of rain. Portland measured 4.67 inches but three fourths of it occurred during a heavy thunderstorm on the 10th. Sixty-four stations had less than an inch and ten stations reported less than .01 inch during the month. The average precipitation for July and August of this year was 1.08 inches, which is the least of record for that period. There were only three days with a measureable amount of rain, while clear, partly cloudy and cloudy days amounted to 21, 8 and 2 respectively.

The extremely hot, dry weather resulted in considerable further deterioration in growing crops. Much of the late corn was damaged beyond recovery and was cut for fodder. Cotton suffered additional damage from the drought. Bolls opened prematurely and picking and ginning were in progress before the end of the month. Meadows and pastures afforded little feed for livestock and some farmers are selling their cattle for lack of feed. Early varieties of rice were being cut and late varieties were heading. Some rice acreage had been abandoned because of lack of water. Seasonal fruits and vegetables were on the market in good quantities but quality was generally poor. Little fall plowing was done because of the hard soil. Forests and fields were very brown and dry for this time of the year and the fire hazard is extremely high.

TEMPERATURE

The mean temperature for the State, as determined from the records of 78 stations, was 84.6°, which is 4.5° above the 51-year average for August. The highest monthly mean temperature was 89.0° at Pine Bluff and the lowest was 78.6° at Gilbert. The highest temperature recorded was 113° at Conway on the 15th and Booneville on the 16th. The lowest was 48° at Lead Hill on the 18th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 108 stations, was 1.03 inches, which is 2.53 inches below the 53-year average for August. The greatest monthly total was 4.67 inches at Portland. Six stations recorded no precipitation. The greatest amount recorded in a 24-hour period was 3.50 inches at Portland on the 10th.　B.N.W.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having -01 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters [a], [b], [c], number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T, Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Camp Chaffee, Fort Smith; Clover Bend, Hoxie; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagletou; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Irons Fork, Exper. Station, Mena; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Heasley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

CLIMATOLOGICAL DATA

3 ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII Little Rock, Ark., September, 1943 No. 9

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

After the exceptionally hot, dry weather that prevailed during July and August, the subnormal temperatures and near-normal precipitation of September afforded considerable relief to livestock and vegetation, but the rains were insufficient to break the drought. The high temperatures of August continued during the first five days of the month with another warm period between the 12th and 15th. Otherwise subnormal temperatures prevailed, deficiencies exceeding 10° on some days. The highest temperature in the State was 104°. This was the highest September temperature in several years, although it did not approach the September record. No freezing weather occurred, and no frosts were reported. There was ample sunshine for vegetation. No destructive winds occurred.

Precipitation in September exceeded the combined totals for the two preceding months. The average rainfall for the State was approximately normal. Some stations in the north-central section measured less than an inch of rain, and a few stations in the extreme eastern and western districts reported over four inches. Most of the rain fell during the first few days and the last two days of the month. For the State there was an average of eight days with a measurable amount of rain. The rivers in the State were at very low stages throughout the month.

Generally favorable weather prevailed for harvesting fall crops. Cotton picking made good progress and was more than half completed by the end of the month. Corn matured rapidly and was being gathered. Rice was being cut and threshed. The planting of spinach, turnips, gardens, and winter grains progressed slowly because of the dry soil. Forest fires were numerous. Soil moisture has been greatly depleted by the long drought, and copious rains will have to fall before late planted gardens, plowing and winter grains can make much progress.

TEMPERATURE

The mean temperature for the State, as determined from the records of 76 stations, was 70.4°, which is 3.9° below the 53-year average for September. The highest monthly mean temperature was 77.7° at Highland, and the lowest was 67.2° at Gilbert. The highest temperature recorded was 104° at Camp Robinson, Highland and Nashville on the 1st and 2d. The lowest was 38° at Gilbert on the 26th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 105 stations, was 3.23 inches, which is 0.08 inch below the 53-year average for September. The greatest monthly total was 7.50 inches at Mountainburg, and the least was 0.81 inch at Mountain Home and Tumbling Shoals. The greatest amount recorded in a 24-hour period was 3.11 inches at Mena on the 29th.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ᵃ,ᵇ,ᶜ, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ¹Precipitation is for the 24-hour period, midnight to midnight. ²Precipitation measured in morning; amount recorded is for the preceding 24 hours. ³Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1. CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII Little Rock, Ark., October, 1943 No. 10

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month averaged only slightly cooler than normal but was the coolest October since 1937. Temperatures were above normal on the 1st and 2d, 12th, 19th to 23d, 29th to 31st. On other days subnormal temperatures prevailed, with deficiencies of 15° or more on some days. Most stations recorded their lowest temperatures on the 16th and 17th, and the highest during the first decade. Freezing weather occurred in all sections of the State on the 16th or 17th, although some stations did not have freezing temperatures. Sunshine was approximately normal. No destructive winds occurred.

Precipitation averaged slightly above normal for the State, and was the first month since May with an excess. Stations in the western portion of Arkansas recorded over four inches, while some stations in the extreme eastern districts measured less than an inch. General rains fell on the 12th and 13th, 23d and 24th, and 30th and 31st. The heaviest rains fell on the 12th and 13th, when many stations measured over two inches in 24 hours. These rains broke the drought that had prevailed since June over most of the State. There was an average of five days with rain during the month; 16 clear, 8 partly cloudy, and 7 cloudy days. Rivers in the State were at low stages all month.

October weather was favorable for harvesting and plant growth in most sections. Cotton picking, corn gathering and rice harvesting progressed and was mostly completed by the end of the month. The general rains were favorable for plowing, the seeding of winter grains, and growth of late truck and gardens. Some stations reported killing frost on the 16th and 17th, but most sections escaped killing frost during October.

TEMPERATURE

The mean temperature for the State, as determined from the records of 77 stations, was 61.3°, which is 1.5 below the 53 year average for October. The highest monthly mean temperature was 66.4° at Highland, and the lowest was 56.1° at Gilbert. The highest temperature recorded was 90° at Pocahontas and Newport on the 2d, Bethesda on the 11th, and Wynne on the 13th. The lowest temperature was 27° at seven stations in the northern section on the 16th or 17th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 107 stations, was 3.48 inches, which is 0.27 inch above the 53 year average for October. The greatest monthly total was 6.51 inches at Mena, and the least was 0.50 inch at Monticello. The greatest amount recorded in a 24 hour period was 4.40 inches at Springbank on the 12th and 13th.

B.N.W.

MISCELLANEOUS PHENOMENA

Dates of

Thunderstorms:--1,2,7,10,12,13,15,16,19,20,21,22,23,24,30,31.

Dense Fog:---1,11,12,19,20,21,27,29,30,31.

High Winds:---12,13,20,23,24,26,28,29,30.

Hail:---24.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning: amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:--Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1. Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut 1, Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR. No record.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVIII LITTLE ROCK, ARK., NOVEMBER, 1943 No. 11

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month averaged slightly cooler than normal for the State as a whole. At individual stations, departures ranged from +0.2° at Grannis and Russellville to −5.0° at Blytheville. Eastern and southern stations recorded the largest negative departures. The highest temperatures of the month occurred on the 1st, 6th, or between the 18th and 21st. The lowest temperatures occurred on the 30th at nearly all stations. The first general cold spell of the season, with freezing temperatures throughout the State, occurred on the 9th and 10th. Killing frost was general on those two mornings. Temperature extremes for the month were not remarkable when compared with those of past Novembers. Sunshine was above normal. No destructive windstorms occurred. There was an average of 19 clear, 5 partly cloudy and 6 cloudy days in November.

For the State as a whole, precipitation amounted to only 30% of normal. It was the driest November since 1910 and the third driest on record. Rainfall was heaviest in the eastern and southern sections, and lightest in the northern and western districts. Practically all the precipitation occurred on the 1st and 2d, and 6th and 7th. Numerous stations measured less than an inch of rain during the month, and several reported rain on only one day.

Winter grains made good progress during the first part of the month because of adequate soil moisture. However, with no rain of consequence after the 7th, the soil became increasingly dry, plant growth lagged, and forest fires became numerous. Smoke from forest fires reduced visibility to less than two miles at times during the latter part of the month. Weather conditions were favorable for butchering, plowing, fence repairing, and other outside activities.

TEMPERATURE

The mean temperature for the State, as determined from the records of 78 stations, was 49.7°, which is 1.6° below the 53-year record for November. The highest monthly mean temperature was 54.5° at Magnolia and the lowest was 45.9° at Lead Hill. The highest temperature recorded was 88° at Fordyce on the 1st. The lowest was 15° at Gilbert, Lead Hill, Mammoth Spring, and Wynne on the 30th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 107 stations, was 1.10 inches, which is 2.61 inches below the 53-year record for November. The greatest monthly total was 3.30 inches at Monticello and the least was 0.10 inch at Fort Smith Water Plant. The greatest amount recorded in a 24-hour period was 2.25 inches at Crossett on the 7th. Several stations reported light snow flurries on the 7th.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning: amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila: Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1. Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

VOL. XLVIII LITTLE ROCK, ARK., DECEMBER, 1943 No. 12

PRICE: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

With temperatures averaging over 2° below normal, this was the coldest December since 1935. The first decade was mild, the remainder of the month quite cold. The highest temperatures of the month occurred on the 2d or 9th at most stations, reaching 80° at some stations in the southern districts. Temperatures were almost continually below normal after the 10th, with freezing weather on many mornings, and throughout the day on several occasions. A moderately severe cold wave overspread the State on the 14th and 15th, causing sub-zero temperatures in the northwestern section, and minima of 10° in the southeastern districts.

Although precipitation for the State was 18% below normal, December was the third wettest month of the year. Most of the precipitation fell in two periods, 5th to 10th, and 24th to 27th. The heaviest rains occurred on the night of the 5th and 6th, some stations reporting more than two inches in 24 hours. Freezing rains fell on the 24th and 25th, coating highways with a layer of ice. Power and communication lines were broken, highway traffic greatly impeded, and several people were injured by falling, or in traffic accidents. Rivers in the State were at low stages all month.

The soil moisture situation improved during December, and winter grains and cover crops were benefited. Some plowing was accomplished before the severe freeze of the 15th. The main farm activities of the month were butchering, cutting spinach, threshing peanuts and cutting wood.

TEMPERATURE

The mean temperature for the State, as determined from the records of 78 stations, was 40.7°, which is 2.1° below the 53-year average for December. The highest monthly mean temperature was 46.8° at El Dorado, and the lowest was 35.3° at Bentonville. The highest temperature recorded was 82° at Arkadelphia on the 9th, and the lowest was —5° at White Rock on the 15th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 107 stations, was 3.43 inches, which is 0.77 inch below the 53-year average for December. The greatest monthly total was 5.58 inches at Mena, and the least was 1,88 inches at Corning. The greatest amount recorded in a 24 hour period was 2.34 inches at Mena on the 5th-6th. Snowfall averaged 0.7 inch, ranging from a trace at many stations to 1.5 inches at Lead Hill.

MISCELLANEOUS PHENOMENA

Dates of

High Winds:--1,6,14,15,16,23,28.

Glaze:---23.24,25,26,27,28,29.

Sleet:---14,22,23,24,25,26,29.

Heavy Fog:---3,4,5,6,7,8,9,10,25,26,27,28,29,31.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters a,b,c, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ¹Precipitation is for the 24-hour period, midnight to midnight. ²Precipitation measured in morning; amount recorded is for the preceding 24 hours. ³Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T, Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:--Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLVIII Little Rock, Ark., Year, 1943 No. 13

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

The annual mean temperature for Arkansas departed only 0.2° from normal. With the exception of a very cold March, the first eight months of the year were considerably warmer than average, the remainder of the year quite cold. December was the coldest month, although the lowest temperatures were recorded in January. Sub-zero temperatures occurred in January, March, and December. August was the warmest month, but July was also considerably warmer than normal. The highest temperature of the year was 113° at Conway on August 15th, and the lowest was −9° at Devils Knob on January 19th. Practically all stations in the State recorded their lowest temperatures of the year on January 19th. The highest temperatures occurred on various dates in July or August. Considering individual stations, annual mean temperatures ranged from 57.3° at Gilbert to 66.2° at Magnolia. The summer of 1943 was the hottest since 1936. At Little Rock there were 23 days with temperatures of 100° or higher.

With an annual average of 35.01 inches of precipitation in the State, the year was the driest since 1936 and the second driest on record. March and May were the only months with excess precipitation. January, February, July, August, and November were very dry. The largest annual total was 47.82 inches at Rogers, and the least was 25.09 inches at DeQueen. The largest monthly total was 19.03 inches at Rogers in May. There was no precipitation at Siloam Springs in January or at DeQueen, Marianna, and Okay in August. The greatest rainfall recorded in 24 hours was 6.93 inches at Lutherville on May 10th-11th. Snowfall was below normal.

The weather during 1943 was unfavorable for agriculture. Devastating floods in the valleys of the Arkansas, White, and Black rivers in May inundated approximately one half million acres of crop land. Although a considerable portion of the acreage was replanted, the season was too far advanced for replanting cotton and corn. Sand deposits and erosion removed a considerable acreage from cultivation. The severe drought during July and August reduced yields of cotton, corn, and truck. Pastures turned brown and afforded little feed for livestock. Freezing weather in the spring and insufficient moisture during the summer reduced the quality and quantity of the fruit crop. The severe freeze of March 3d resulted in considerable damage to the Elberta peach crop. The strawberry yield was cut by low temperatures around the middle of April and by dry weather during the latter part of the month.

Continued from page 73

ARKANSAS RIVER

Heavy to excessive rains in northwestern Arkansas and in Oklahoma from May 7th to 11th caused the most disastrous flood since 1927. As much as 13 inches of rain fell during this period resulting in a very rapid rise in the river. The river rose 21 feet in 24 hours at Morrilton and almost as much in the same period at other stations. Further heavy rains during the latter part of May caused a second rise in the river. At Fort Smith, Ozark, Dardanelle, and Pine Bluff the crests exceeded those in 1927 and the crest at Fort Smith, 41.8, is the highest stage on record. The river reached flood stage at Fort Smith on May 10th and did not go below flood stage at Pine Bluff until June 4th. The river was at low stages the remainder of the year.

WHITE AND BLACK RIVERS

As a result of heavy rains late in December, 1942, the White and Black rivers were at moderate flood stages early in January. The heavy rains in May caused very high stages, and much land along the rivers was inundated. Property loss, especially in prospective crops, was considerable. The lower reaches of the White remained in flood stage until the middle of June.

OUACHITA AND RED RIVERS

The Ouachita River was in flood for about a week in March, reaching a stage of 32.4 feet at Camden on the 18th. Moderate flood stages were again reached late in April.

The Red River was slightly above flood stage at Fulton from May 16th to 19th. Flood loss was small on these rivers during the year.

WEATHER BY MONTHS

January:—Temperatures fluctuated considerably, but the monthly average was near normal. The coldest weather of the year occurred between the 18th and 20th. Temperatures ranged from — 9° to 87° during the month. This was the driest January of record, many stations reporting less than an inch of precipitation.

February:—The month was considerably warmer than average with no unusually low temperatures. Temperatures ranged from 7° to 83° in the State. This was the second driest February of record. Only one-third of the stations measured more than inch of precipitation. Some oats, potatoes, and other crops were planted, although soil moisture was considerably depleted.

March:—The month was cold and wet. The lowest March temperatures of record were recorded at most stations on the 3d. Much of the Elberta peach crop was killed, and early planted truck and gardens were injured considerably by the severe cold. The heavy rains were very beneficial in restoring soil moisture and conditioning the land for plowing and planting.

April:—The month was slightly warmer and drier than average. Freezing temperatures caused much damage to the strawberry crop on the 15th. Soil moisture was becoming depleted during the latter part of the month, interfering with germination and growth of crops.

May:—This was the wettest month of the year. Precipitation ranged from 1.36 inches at Monticello to 19.03 inches at Rogers. Several stations in the northwestern section measured over ten inches. These excessive rains, with heavy rains in Oklahoma and Missouri, resulted in a disastrous flood on the Arkansas, White, and Black rivers. Thousands of acres of land were inundated. Considerable farm land was badly eroded.

June:—The month was warm and comparatively dry. Temperatures were above normal during the first 28 days, considerably below normal on the last two days. Most of the precipitation resulted from afternoon thundershowers, and amounts varied widely between stations, generally light in the southern counties.

July:—This was a very warm month with frequent daily temperatures of 100° or higher. It was the second driest July on record. Cotton made fair progress and was blooming and fruiting, with some bolls open at the end of the month. Corn and other crops deteriorated as a result of insufficient moisture.

August:—The month was very hot and dry, and the drought became intensified. Precipitation was less than 30% of normal.

There were many days with temperatures of 100° or higher. All crops deteriorated. Much corn was cut for fodder, cotton bolls opened prematurely, and forests and fields turned brown.

September:—This was the coolest September since 1924. Precipitation was near normal, and exceeded the combined totals for July and August. Late crops were benefited, but the rainfall was insufficient to break the drought. The weather was favorable for harvesting crops. Spinach, turnips, late gardens, and winter grains were being planted where the soil was not too dry.

October:—Temperatures were slightly below average, and rainfall was above normal. Freezing weather occurred in all sections on the 16th and 17th. The weather was favorable for harvesting crops and plant growth. The harvest of cotton, corn, and rice was mostly completed during the month.

November:—The month was slightly cooler and considerably drier than average. Freezing temperatures and killing frost on the 9th and 10th ended the growing season in most sections. This was the driest November since 1910. Soil moisture became greatly depleted and forest fires were numerous.

December;—This was the coldest month of the year, although minima were not as low as in January. However, there were freezing temperatures on many mornings. Freezing rain on the 24th and 25th caused hazardous driving conditions on highways. Many power and communication lines were broken.

*Indicates freezing temperature, no killing frost reported.

Departures from normal temperature are computed from averages of entire period for stations having 10 or more years record. Departures of precipitation with 15 years or more record are computed from a normal or "standard mean," adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive. T., less than 0.01 inch rain or melted snow. Reference letters ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing. § Also on later dates. †Post-office addresses of these stations as follows: Alum Fork Reservoir, Paron; Beaty Lake, Forest City: Bethesda, Batesville: Big Lake Outlet, Manilla; Boughton, Route 4, Prescott: Cold Springs, Olio; Devils Knob, Salus; Eagle Gap, Eagleton· Eleven Point, Rt. 1, Ravendon Springs: Fordyce, Rt. 1, Fordyce; Fort Smith Water Plt, Mountainburg; Green Mountain, Calico Rock: Heber Spgs, Tumbling Shoals; Highland, R.F.D. 3, Nashville; Huttig Felsenthal Index, Route 5, Texarkana; Lutherville Route 1· Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Rt. 3, Morrilton: Mulberry, Rt 1, Mulberry; Nimrod, Ola; Odell, Route 1, Canehill; Rosebud, Route 2, Mount Vernon; Sheridan, Hensley; Sparkman, Route 1, Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass,

CLIMATOLOGICAL DATA

3 ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., January, 1944 No. 1

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

January was slightly warmer than normal. The first half of the month was quite cold with freezing temperatures on most mornings. Considerably milder weather prevailed after the 15th, and freezing temperatures were infrequent. A severe cold wave overspread the State on the 9th, causing sub-zero temperatures in the northwestern section. The highest temperatures of the month occurred between the 21st and 27th, exceeding 80° at a few stations. Sunshine was considerably above normal.

January precipitation was deficient, amounting to only 58% of normal. The heaviest amounts occurred in the southern section where a few stations measured over five inches. Several stations in the extreme northern districts reported less than an inch. Most of the precipitation occurred on the 1st, 2d, 7th, 8th, and 27th. The heaviest snowfall in several years occurred during the night of the 7th-8th. The fall measured over 12 inches in some sections, and remained on the ground for several days. Light sleet fell on the 14th and 15th.

High winds were reported from many sections of the State on the 27th, but caused little damage. At Grannis, a residence and a chicken brooder house were damaged to the extent of$ 750.

Cold weather prevented much outside farm work during the first half of January. However, with much warmer weather prevailing during the second half of the month, some plowing, tree pruning, and other work was accomplished. Gardens were being planted in the southeastern section during the latter part of the month. An ample snow cover protected winter grains from the low temperatures of the 9th and 10th.

TEMPERATURE

The mean temperature for the State, as determined from the records of 79 stations, was 42.2°, which is 1.0° above the 54-year average for January. The highest monthly mean temperature was 46.6° at El Dorado, and the lowest was 37.0° at Gilbert. The highest temperature recorded was 82° at Arkadelphia on the 26th, and the lowest was —15° at Lead Hill on the 9th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 106 stations, was 2.50 inches, which is 1.78 inches below the 54 year average for January. The greatest monthly total was 5.36 inches at Camden, and the least was 0.58 inch at Corning. The greatest amount recorded in a 24 hour period was 3.38 inches at Story on the 7th. Snowfall averaged 6.5 inches, ranging from about an inch near the southern border of the State to 20.5 inches at Sugar Grove.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T Trace, or precipitation less than 0.01 inch. Reference letters ^{a},^{b},^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. ^{1}Precipitation is for the 24-hour period, midnight to midnight. ^{2}Precipitation measured in morning; amount recorded is for the preceding 24 hours. ^{3}Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus: Eagle Gap, Eagleton; Eleven Point, Route 1. Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar: Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., February, 1944 No. 2

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

Temperatures averaged more than four degrees above normal during the month, and it was the warmest February in six years. The first decade was considerably warmer than normal, the following nine days were quite cold, while the remainder of the month was much warmer than normal. Most stations reported their highest temperatures of the month on the 24th. The lowest temperatures occurred between the 12th and 15th, and ranged from slightly above zero in the northern sections to the lower twenties in the southeastern counties.

Precipitation averaged 214% of normal, and it was the third wettest February of record. Rain occurred at frequent intervals, some stations reporting rain on 18 days. The heaviest rains occurred in the southern and eastern districts and the least in the northwestern section. At Crossett more rain fell in 24 hours than usually occurs in an entire month of February. Many stations measured from two to three inches of rain in 24 hours.

The weather was favorable for outside work during the first week of February, and farmers were plowing, preparing seed beds, and planting early gardens. However, frequent rains during the remainder of the month and freezing temperatures between the 11th and 16th caused considerable delay in spring farm operations. Winter grains and pastures made good progress. Some potatoes were planted. Spinach was being cut. Peach, pear, and plum trees were blooming at the end of the month.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 77 stations, was 48.2°, which is 4.5° above the 54-year average for February. The highest monthly mean temperature was 53.6° at El Dorado and Portland, and the lowest was 41.2° at Gilbert. The highest temperature recorded was 87° at Morrilton on the 24th; the lowest was 4° at Lead Hill on the 15th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 106 stations, was 7.34 inches, which is 3.91 inches above the 54-year average for February. The greatest monthly amount was 13.78 inches at Dermott, and the least was 4.23 inches at Fayetteville Experiment Station. The greatest amount reported in any 24 consecutive hours was 4.90 inches at Crossett on the 25th and 26th. The average snowfall for the State was 2.5 inches, which is 0.7 inch above normal. Amounts ranged from none in the extreme southern sections to 9.0 inches at Devils Knob.

B.N.W.

MISCELLANEOUS PHENOMENA

Dates of

High Winds:--3,5,10,11,17,25,28.
Sleet:--13,14.
Hail:--16,17,26.
Thunderstorms:--8.16,17,21,22,24,25,26,27,28.
Heavy Fog:--2,3,8,10,17,19,21,22,23,24,25,26,27,28.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus: Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., March, 1944 No. 3

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

The month was only slightly cooler than an average March. The coldest weather occurred during the first ten days. The lowest temperatures of the month were reported on the 8th at practically all stations, minima ranging from slightly below freezing in the extreme southern sections to as low as 14° in the Ozarks. Mild weather prevailed from the 11th to 18th, daily temperatures exceeding 80° at times during this period. The weather was quite cool during the remainder of the month although freezing temperatures were infrequent and confined to stations in the northern section.

March precipitation averaged about one and one-half inches above normal for the State. Rainfall was lightest in the northern section and heaviest in the southeastern counties. Rain fell on an average of ten days and was quite heavy on the 16th, 18th and 28th, resulting in rising stages on the rivers of the State. The Ouachita River was in flood early in March and again towards the close of the month. At Camden, the Ouachita crested at 34.2 feet on the 25th, inundating considerable bottom land and causing some flood damage. The White River slightly exceeded flood stage from Georgetown south on two occasions. Stages on the Arkansas were quite high during the second half of the month, but no flooding occurred.

During a severe thunderstorm on the night of the 26th heavy hail caused considerable property damage in Poinsett County. Property damage was quite heavy at Marked Tree; many windows and sky lights were broken and roofs damaged. The village of Lepanto also suffered considerably from the hail. The hailstones were reported to be larger than golf balls.

March weather was not favorable for agriculture. Plowing and planting were delayed by frequent rains and wet soil. Some corn was planted on lighter soils. Grains and meadows made good progress. Farm work was generally three to four weeks behind schedule at the close of the month.

TEMPERATURE

The mean temperature for the State, as determined from the records of 79 stations, was 51.3°, which is 1.1° below the 54-year average for March. The highest monthly mean temperature was 57.6° at Portland, and the lowest was 43.7° at Devils Knob. The highest temperature recorded was 87° at Corning on the 15th, and the lowest was 14° at Devils Knob and White Rock on the 8th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 106 stations, was 6.13 inches, which is 1.48 inches above the 54-year average for March. The greatest monthly total was 11.80 inches at Arkansas City, and the least was 3.24 inches at Cotter. The greatest amount recorded in a 24-hour period was 6.99 inches at Monticello on the 28th. Snowfall was below normal, averaging only 0.2 inches.

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used. §Also on other dates. **Not used in means and summaries. ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manila; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1. Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover: Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., April, 1944 No. 4

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

April averaged somewhat colder than normal. The coldest weather occurred between the 3d and 5th, when freezing temperatures were recorded in the northern section of the State. The highest occurred on the 10th, 15th, or between the 19th and 23d. Lead Hill reported a minimum temperature of 19° on the 5th, which is within two degrees of the lowest temperature ever recorded in the State during April.

April precipitation was ample in all sections and excessive at a few stations. Fourteen stations measured over ten inches and 24 stations recorded less than five inches during the month. Heavy rains of more than four inches occurred at several stations on the 8th and 9th, and during the night of the 22d-23d. On the 4th, Harrison measured a half inch of snow and a few other northern stations reported flurries.

As a result of heavy rains in March and above normal precipitation in April, all the rivers in this district were in flood at one or more gaging stations during the month. However, only the Black and Ouachita rivers had crests sufficiently high to cause flood damage. The lower portions of the White and Ouachita rivers were out of their banks most of the month. At Arkadelphia, the Ouachita went above flood stage four times during April.

A series of tornadoes occurred over the State on April 10th. The first tornado was observed near Magnolia, Columbia Co., at 6:50 p. m. and the last one near Parkin, Cross Co. at about midnight. Tornadoes were also reported in Cleburne, Independence, Randolph, and Sharp counties on the 14th. As a result of these destructive storms, 44 people were killed, 331 injured, over 600 homes destroyed or damaged, and more than 1,000 other buildings destroyed or damaged. Property damage is estimated at more than $700,000.

April, like March, was distinctly unfavorable for agriculture. Cool weather, frequent rains, wet soil, and flooded lowlands caused further delay in getting spring crops planted. Some corn and cotton were planted on the lighter soils but much remained to be planted at the end of the month. Potatoes were up and doing well in some sections; in other sections replanting was necessary. Meadows, pastures, and small grains continued to make good growth. Early strawberries were ripening at the close of the month.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 78 stations, was 60.1°, which is 1.4° below the 54-year average for April. The highest monthly mean temperature was 65.2° at Portland, and the lowest was 53.8° at White Rock. The highest temperature recorded was 88° at Okay on the 15th; the lowest was 19° at Lead Hill on the 5th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 107 stations, was 6.65 inches, which is 1.69 inches above the 54-year average for April. The greatest monthly amount was 12.59 inches at Mountain Valley, and the least was 2.83 inches at Green Forest. The greatest amount reported in any 24 consecutive hours was 6.15 inches at Mountain Valley on the 22d-23d. B.N.W.

MISCELLANEOUS PHENOMENA

Dates of

Symbols for Climatological Data Table:--The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period for stations with 10 to 14 years the means for the period of record are used §Also on other dates. **Not used in means and summaries ‡‡Evaporation station. †Post office addresses (see notes for daily precipitation table). T. Trace, or precipitation less than 0.01 inch. Reference letters ^{a}, ^{b}, ^{c}, number of days missing.

Symbols for Daily Precipitation Table:--Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of observation. [1]Precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation measured in morning; amount recorded is for the preceding 24 hours. [3]Indeterminate. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than 0.01 inch. ‡‡Evaporation Station. †Post Office addresses as follows:—Alum Fork Reservoir, Paron; Beaty Lake, Forest City; Bethesda, Batesville; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cold Spings, Olio; Devils Knob, Salus; Eagle Gap, Eagleton; Eleven Point, Route 1, Ravendon Springs; Fordyce, Route 1, Fordyce; Fort Smith Water Plant, Mountainburg; Green Mountain, Calico Rock; Heber Springs, Tumbling Shoals; Highland, R.F.D.3, Nashville; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Moro Bay, Route 3, El Dorado; Morrilton, Route 3, Morrilton; Mulberry, Route 1, Mulberry; Odell, Route 1, Canehill; Rosebud, Route 2, Mt. Vernon; Sheridan, Hensley; Sparkman, Rt. Sparkman; Springbank, Doddridge; Stamps, Buckner; Turnpike, Dover; Walnut Grove, Cord; White Rock, Cass.

Symbols for Daily Maximum and Minimum Temperatures:--Thermometers read near sunset unless otherwise indicated. ***Midnight to midnight. §§Thermometers read in the morning, maximum temperature then read is charged to the previous day on which they almost always occur. ‡‡Evaporation station. NR, No record.

ARKANSAS SECTION

WALTER C. HICKMON

Vol. XLIX Little Rock, Ark., May, 1944 No. 5

Price: 25 cents per year (not stamps). Remit to Superintendent of Documents Washington, D. C.

GENERAL SUMMARY

May averaged slightly above normal in temperature. The first eight days were quite cold with temperatures averaging about eight degrees below normal, but seasonable temperatures prevailed during the rest of the month. Practically all stations recorded their highest temperatures between the 14th and 19th and their lowest temperatures between the 5th and 7th. On the 6th, four stations in the northwestern section experienced freezing weather, and light to killing frost was quite general over the northern half of the State.

Precipitation averaged about one and one half inches above normal for the State as a whole. The least amounts were measured by stations in the northeastern and extreme northern counties and the largest amounts by stations in the southern section. Most stations reported heavy rains on the first three days of the month and frequent thundershowers from the 20th to the 30th of the month. Reports of two inches to more than four inches of rain in 24 hours were quite plentiful early in May. Hailstorms caused some damage to crops and gardens in the northwestern section on the 24th and 25th.

Heavy rains during the early part of May resulted in flood stages along the Arkansas, Black, Lower White, and Ouachita Rivers. Flooding was not severe except along the Ouachita where crest stages were unusually high. At Camden the river crested at 42 feet, the highest stage of record at the present gage site.

May was generally favorable for agriculture. Heavy rains, flooded lowlands, and cold weather curtailed farm activities during the first eight days. A considerable acreage of spinach was inundated in the Arkansas River Valley, and crop land in the Ouachita, Black and Lower White river valleys was flooded or too wet to work. However, beginning about May 10th, conditions improved rapidly, and warm, dry, and sunny weather favored planting and cultivation of crops. Cotton planting was largely completed by the 25th, and chopping was in progress. Although late, corn made good progress and was in fairly good condition. Meadows, pastures, gardens, and truck made good growth, and rice planting was completed.

TEMPERATURE

The mean temperature for the State, as determined from the reports of 76 stations, was 70.3°, which is 1.1° above the 54-year average for May. The highest monthly mean temperature was 73.5° at Pine Bluff, and the lowest was 66.1° at Devils Knob. The highest temperature recorded was 96° at Corning on the 17th and the lowest was 28° at White Rock on the 6th.

PRECIPITATION

The average precipitation for the State, as determined from the reports of 106 stations, was 6.42 inches, which is 1.46 inches above the 54-year average for May. The greatest monthly amount was 14.23 inches at Arkansas City, and the least was 1.45 inches at Madison. The greatest amount reported in any 24 consecutive hours was 5.30 inches at Hot Springs on April 30th-May 1st.
